## General information

**Java-developer.** Main skills are developing enterprise level products for financial and e-commerce companies using Java language.

I can take part in project as a temporary employee as well as a permanent.

I'm dynamic, versatile and aim to reach goals. I enjoy making the real things, that help people live better. I develop my "pet"-projects using Java/Spring, sometimes Go and Python, or anything else. I really like microservice architecture and most of my projects based on it. Unfortunately, all of my projects are not ready for production.

Married, no kids.

**Godlike using Google.**

## Skills

### Development

**Java**-developer. **J2SE**, **JavaEE** (EJB, servlets, JAAS, JAX-WS and so on). Recently, I often use Spring Framework, especially Spring Boot.

### Frontend

Good knowledge in **HTML/CSS/JS**(jQuery). Little experience in **Angular** and **ReactJS**. Also I've used npm, Grunt, Webpack.

### Team-work

Good team member, know main collaborative software products (**Git**, **SVN**, **mvn**, **TeamCity**, **Jira**, **Confluence**...). Have worked with containers(**Docker**). Experienced in managing of small developers team (4-7), tasks organizing, planning development and testing, release management. Experienced in designing and integrating development processed.

### Development operations

Try to automate all repeated operations, such as building, testing or deployment projects and infracture. Usually use python for custom solutions. Also, I've used **Ansible**

### Architecture

Experienced with architecture enterprise-level products, design, sizing and scaling projects. I've done technical reviews and written specifications and business requirements documents. In spite of the strong knowlege architecture/programming patterns, I don't like using them everywhere. I'm trying to keep KISS (Keep It Simple, Stupid) principle. Also, I know what the **RESTful** architecture means and what is the difference between "RESTful architecture" and "JSON-like API".

### Miscellaneous

For private projects: **Groovy+Grails**, **Spring**, **Backbone/Angular+Twitter Bootstrap**, **Oracle WLS**, **SOASuite**, **BPMSuite** - deployment and tuning infrastructure, business process development (BPM and SOA suite). **RDBMS**, **SQL** - advanced user level

## Technical Skills

Java	Front-end	Misc
Java Core	JSF2 / JSP / ADF	Ansible
JavaEE	HTML / XHTML	Perl/Python/Shell scripting
Spring	Javascript / JQuery	XML
Maven	CSS / LESS	SQL
Weblogic / WildFly / Tomcat		Linux
JSP / JSF / RichFaces		

## Experience

### Lamoda, LLC "Kupishoes" (Moscow, [www.lamoda.ru](http://www.lamoda.ru)) April 2016 — currently Teamlead

Leading on java development team (5ppl) which create Warehouse Managment System. Project contains 4 main parts: Core(JavaEE, REST and SOAP services, Remote EJB), ESB(JavaEE, JAXB, JAXWS), Monitoring(Spring, REST, Vaadin) and client-side: RichClient (NetBeans platform) and Web-client (Angular)

Responsibilities:

- Java development team leading: manage human resources, coordinate development and testing, run meetings, solve developers problems.
- Designing architecture, as a part of tech-leaders team.
- Release managment: plan releases and sprints, estimate tasks, scope sprints, distribute tasks among developers.
- Improving intrateam management toolkit.
- Improving developers experience and qualifications.
- Improving CI/CD processes.
- Code review, merge branches, freeze code and so on...

Technology stack:

Platform: Java 8, J2EE, Spring Framework

Techs: JAX-B, JAX-WS, JPA(Hibernate), Apache Camel, EJB Web: Angular 1.5, JSF

Application Server: Tomcat, WildFly

DB: PostgreSQL 9.4, Redis

Misc: Maven, Netbeans Platform, ActiveMQ, Git, Bamboo and so on

### Wikimart, (Moscow, [www.wikimart.ru](http://www.wikimart.ru)) Teamlead

January 2016 — April 2016

Leading distributed Java development back-office team (4ppl).

Responsibilities:

- Java development team leading: manage human resources, motivate team, do meetings, solve developers problems.
- Design and make architecture decisions as a technical consultant for project managers.
- Rewrite business requirements to technical specifications.
- Code review.
- Manage sprints, releases, tasks.
- Consult and discuss projects with business users.
- Monitoring technical and business metrics (KPI, CTR, bounce rate)

Main projects were creating integration with new strategic business partners, support and critical backend services (e.g. front-end integration, ERP integration(SAP), marketplace services, logistic services)

Technology stack:

Platform: Java 8, Spring Framework

Architecture: mainly microservice

Techs: jsonrpc4j, EhCache, myBatis, Netty, Elasticsearch, Apache Lucene

Misc: Maven, MySQL, Jenkins, Git, RabbitMQ

### Wikimart, (Moscow, [www.wikimart.ru](http://www.wikimart.ru)) Senior java developer

October 2015 — January 2016

Develop logistic scheme services for Wikimart's retail part. Responsibilities:

- Design and develop integration services between java backend and SAP ERP
- Manage and co-operate with outsourcer team for developing the integration service.
- Design and develop services for calculating delivery terms

Main goal, I think, was that company successfully integrate SAP ERP system in really short time. Also I would like to mark that I have an official letter of thanks for helping in SAP integration project from the company and CEO.

Technology stack:

Platform: Java 8, Spring Framework

Techs: jsonrpc4j, EhCache, myBatis, Netty Misc: Maven, MySQL, Jenkins, Git, RabbitMQ

---

## OTR (Moscow, [www.otr.ru](http://www.otr.ru))

January 2014 — October 2015

Teamlead

Leading of small java developers team (3 ppl). We were developing salary projects management system for one of the biggest Russian banks.

The project has been developed with Oracle Fusion MiddleWare Platform.

Business logic layer - BPM, integration layer - OracleSOA, view layer - ADF.

In general, my responsibilities as a teamleader were estimating tasks, managing them between developers, technical consulting for customer and analytics.

As a developer, I designed and developed view layer and critical modules of application.

Also, I supported users and maintain infrastructure.

My greatest achievement, I think, was that development process didn't need a lot of operation management, and every developer known what he should do at every moment. I think it was really hard goal, because there were plenty of task with "yesterday's" deadlines and requirements used to change very often.

Technology stack:

Platform: Oracle Fusion Middleware, JavaEE 7

Techs: JAX-B, JAX-WS, BPM, JAAS, Weblogic API, JPA Web: ADF

Application Server: Weblogic 11g

Misc: Ant, OracleDB

---

## OTR (Moscow, [www.otr.ru](http://www.otr.ru))

August 2012 — January 2014

Java developer

Take part in developing project for one the biggest Russian banks. Main tasks were developing a view layer for the project: get data from webservices, show it to users, get user's data, validate, send it to the webservices.

Also layouted project's interface (JSF2, RichFaces + HTML/CSS/JS)

Technology stack:

Java EE 6 stack: JSF + Facelets + JBoss Richfaces 4.x, CDI, EJB, JAX-WS, JAXB

Web: CSS, JQuery

Platform: Java 7

Application Server: JBoss 7.1.1 AS

---

## Surgutneftegazbank. Moscow branch.

June 2011 — August 2012

Senior engineer, software group, acquiring department

Creating automatical reports for acquiring department

Support internal department software and infrastructure

Develop "Broken POS prediction system" (Perl)

---

## Surgutneftegazbank, Surgut

September 2010 — June 2011

Engineer, software group, acquiring department

Support POS-terminals

Develop "Broken POS prediction system" (Perl)

Integrate bug-tracking system and support department's infrastructure

Engineer's degree  
Engineer of technology and design of computer systems
