General information

Java-developer. Main skills are developing enterprise level producs for financial and e-commerce companies using Java language. But, today, it has become a bit boring, and I'd like to have more opportunities to influence on project direction and technologies. I can take part in project as a temporary employee as well as a permanent.
I'm dynamic, versatile and aim to reach goals. I enjoy in making the real things, which are helps people to lives better. I develop my "pet"-projects using Groovy+Grails or Spring. I really like microservice architecture and most of my projects based on it. Unfortunately, all of my projects are not production ready.

Married, no kids.

Godlike using Google.

Skills

Development

Java-developer. **J2SE**, **JavaEE** (EJB, servlets, JAAS, JAX-WS and so on). Recently, often use Spring Framework, especially Spring Boot.

Team-work

Good team member, know main collaborative software products (Git, SVN, mvn, TeamCity, Jira, Confluence...). Have worked with containers(Docker). Experienced in managing of small developers team (4-7), tasks organizing, planning development and testing, release management. Experience in designing and integrating development processed (Agile-like)

Architecture

Experience with architecture enterise-level products, design, sizing and scaling projects. Do technical review and rewrite of specifications and business requirements documents. In spite of the strong knowlege architecture patterns, I don't like to use them everywhere. Try to keep KISS(Keep It Simple, Stupid) principle

Frontend

Basical knowlege in HTML/CSS/JS(jQuery). Little experience in Angular.

Development operations

Try to automate all repeated operations, such as building, testing or deployment projects and infracture. Usually use python for custom solutions.

Miscellaneous

For private projects:
Groovy+Grails, Spring, Backbone/Angular+Twitter Bootstrap
Oracle WLS, SOASuite, BPMSuite - deployment and tuning infrastructure, business process development (BPM and SOA suite).
RDBMS, SQL - advanced user level

Technical Skills

Java	Front-end	Misc
Java Core	JSF2 / JSP / ADF	Grails

JavaEE	HTML / XHTML	Perl/Python/Shell scripting
Spring	Javascript / Jquery	XML
Maven	CSS / LESS	SQL
Weblogic / WildFly / Tomcat		Linux
JSP / JSF / RichFaces		

Experience

Lamoda, LLC "Kupishoes" (Moscow, www.lamoda.ru) April 2016 — currently
Teamlead

Leading on java development team (4ppl) which create Warehouse Managment System. Project contains 4 main parts: Core(JavaEE, REST and SOAP services, Remote EJB), ESB(JavaEE, JAXB, JAXWS), Monitoring(Spring, REST, Vaadin) and client-side: RichClient (NetBeans platform) and Web-client (JSF)
Responsbilities:
- Java development team leading: manage human resources, coordinate development and testing, do a meetings, solve developers problems.
- Designing architecture, as a part of tech-leaders team.
- Release managment: plan releases and sprints, estimate tasks, scope sprints, distribute tasks among developers.
- Improving intrateam management toolkit.
- Improving developers experience and qualifications.
- Code review, merge branches, freeze code and so on...

I have not worked a lot with this team, so there are no achievements, that I can report.

Technology stack:
Paltform: Java 8, J2EE, Spring Framework
Techs: JAX-B, JAX-WS, JPA(Hibernate), Apache Camel, EJB Web: Vaadin, JSF, Angular2
Application Server: Tomcat, WildFly
DB: PostrgeSQL 9.4, Redis
Misc: Maven, Netbeans Platform, ActiveMQ, Git, Bamboo and so on

---

Wikimart, (Moscow, www.wikimart.ru) January 2016 — April 2016
Teamlead

Leading distributed Java development back-office team (4ppl).
Responsibilities:
- Java development team leading: manage human resources, motivate team, do a meetings, solve developers problems.
- Design and make architecture decisions as a technical consultant for project managers.
- Interpretate business requirements to techical specifications.
- Code review.
- Manage sprins, releases, range tasks.
- Consulte and discuss projects with business users.
- Monitoring technical and business metrics (KPI, CTR, bounce rate)

Main projects were creating integration with new strategic business partners, support and critical backend services (e.g. front-end integration, ERP integration(SAP), marketplace services, logistic services)

Technology stack:
Paltform: Java 8, Spring Framework
Architecture: mainly microservice
Techs: jsonrpc4j, EhCache, myBatis, Netty, ElasticSearch, Apache Lucene
Misc: Maven, MySQL, Jenkins, Git, RabbitMQ

Wikimart, (Moscow, www.wikimart.ru) October 2015 — January 2016
Senior java developer

Develop logistic scheme services for Wikimart's retail part. Responsibilities:
- Design and develop integration services between java backend and SAP ERP
- Manage and co-operate with outsourcer team for developing the integration service.
- Design and develop services for calculating delivery terms

Main goal, I think, was that company sucessfully integrate SAP ERP system in really short time. Also I would like to mark that I have an official letter of thanks for helping in SAP integration project from the company and CEO.

Technology stack:
Paltform: Java 8, Spring Framework
Techs: jsonrpc4j, EhCache, myBatis, Netty Misc: Maven, MySQL, Jenkins, Git, RabbitMQ

OTP (Moscow, www.otr.ru)
Teamlead

January 2014 — October 2015

Leading of small java developers team (3ppl). We were developing salary projects management system for one the biggest Russian banks.
The project has been developed with Oracle Fusion MiddleWare Platform.
Business logic layer - BPM, integration layer - OracleSOA, view layer - ADF.

In general, my responsibilities as a teamleader were estimating tasks, managing them between developers, technical consulting for customer and analytics.
As a developer, I designed and developed view layer and critical modules of application.
Also, I supported users and maintain infrastructure.
My greatest achivement, I think, was that development process didn't need a lot of operation managment, and every developer known what he should do at every moment. I think it was really hard goal, because there were plenty of task with "yeasterday's" deadlines and requirements used to chane very often.

Technology stack:
Paltform: Oracle Fusion Middleware, JavaEE 7
Techs: JAX-B, JAX-WS, BPM, JAAS, Weblogic API, JPA Web: ADF
Application Server:Weblogic 11g
Misc: Ant, OracleDB

OTR (Moscow, www.otr.ru)
Java developer

August 2012 — January 2014

Take part in developing project for one the biggest Russian banks. Main tasks were developing a view layer for the project: get data from webservices, show it to users, get user's data, validate, send it to the webservices.
Also layouted project's interface (JSF2, RichFaces + HTML/CSS/JS)

Technology stack:
Java EE 6 stack: JSF + Facelets + JBoss Richfaces 4.x, CDI, EJB, JAX-WS, JAXB
Web: CSS, Jquery
Platform: Java 7
Application Server: JBoss 7.1.1 AS

Surgutneftegazbank. Moscow office.
Senior engineer, software group, aquaring departmnet

June 2011 — August 2012

Creating automatical reports for acquiring department
Support internat department software and infrastructure
Develop "Broken POS prediction system" (Perl)

Surgutneftegazbank, Surgut
Engineer, software group, aquaring departmnet

September 2010 — June 2011

Support POS-terminals
Develop "Broken POS prediction system" (Perl)
Integrate bug-tracking system and support deparment's infrastructure

---

Education

Tomsk State University of Control Systems and Radioelectronics
Engineer's degree
Engineer of technology and design of computer systems
